

Alberto Ambriz

Software Engineer

Colima, Mexico • +52-(314)-157-6598 • albertpoambez@icloud.com
Portfolio: byQuesters.github.io/Portfolio/ • GitHub: github.com/byQuesters

Professional Profile

Software Developer with over 4 years of experience in web and mobile development, specializing in technologies such as **React, Next.js, Prisma, and PostgreSQL**. Software Engineering student with a strong focus on creating scalable, efficient, and user-centric solutions. Agile in multidisciplinary teams, with critical thinking and a focus on continuous improvement.

- Immediate availability.
- Versatility in frontend, backend, and mobile technologies (Full Stack).

Experience

St. John's College

Manzanillo, Colima, Mexico.

Software Development

March 2025 – May 2025

Design and development of a responsive landing page focused on user conversion, optimized for mobile devices, and utilizing modern UX/UI practices. Integration with Google Maps as a geolocated acquisition channel to improve lead capture. Current web technologies were used to ensure fast loading times and cross-browser compatibility.

Achievements:

- I developed a website using NextJS for dynamic optimization.
- I designed and implemented a website for St. John's, which facilitated the business's digital presence and improved its sales reach.
- I integrated the website URL into its Google Maps profile, significantly increasing online visibility and attracting new customers through local searches.
- As a result, an increase in the number of visits and business contacts through the website was reported.

Key Responsibilities:

- Interface design in Figma and client validation.
- Front-end development using Next.js, HTML5, CSS3, JavaScript, and Bootstrap.
- On-page SEO optimization and load time reduction.
- Photo capture and editing for web content.

Salon Matiz

Jalisco, Mexico.

Software Development

December 2024 – February 2025

Design, development, and implementation of a custom web application for appointment management in a beauty salon, with a focus on automation, operational efficiency, and user experience.

Key Responsibilities:

- Modular architecture design using the MVC pattern.
- Complete CRUD development for appointments, services, users, and notifications.
- Business logic implementation with automatic scheduling conflict prevention.
- Risk analysis and rule validation through functional testing.
- Direct communication with end users to define requirements and ensure usability.

Achievements:

- 100% reduction in errors due to double appointments thanks to automated availability logic.
- Improved business organization and control, facilitating daily management and communication with clients.
- Increased efficiency of the customer service flow by eliminating manual registration processes.

Relevant Projects

EnergyFlow (2025 · Collaborative academic project)

Implementation of a comprehensive energy monitoring system developed in NextJS with Prisma (PostgreSQL), based on a Digital Twin architecture, which significantly optimizes the management of electrical energy in one or more buildings. Through an already functional platform that integrates measurement sensors (Particle), real-time data transmission, structured storage, and dynamic visualization, improving operational efficiency and contributing to institutional sustainability.

Harmony & Heaven (2024 · Collaborative Academic Project)

Development of a comprehensive system for an online musical instrument store. The application includes real-time inventory management, a point-of-sale (POS), an automated supplier ordering system, and the generation of detailed monthly and annual sales statistics. Implemented with React for a dynamic and responsive interface, and MySQL for a robust database. The project stands out for its organized architecture, scalability, and focus on operational business efficiency.

Academic Training

Software Engineering (in progress)

Faculty of Electromechanical Engineering, Universidad de Colima.

Estimated date: 2026

Programming Technician (Baccalaureate)

Baccalaureate #8, University de Colima.

2019 - 2022

Technical Skills

Programming Languages: JavaScript, Python, PHP, Swift, Kotlin, C, C++.

Frameworks & Libraries: React.js, Next.js, Node.js, Bootstrap, Web Components.

Databases: MySQL, PostgreSQL, Supabase.

Tools: Git, Postman, VS Code, Terminal, Docker, NoMachine, Xcode, Vercel, AWS.

Methodologies: Scrum.

Systems: macOS, Windows, Linux.

Soft and Analytical Skills

- Conflict management and teamwork.
- Risk analysis and informed decision-making.
- Critical thinking and complex problem-solving.
- Effective communication with multidisciplinary teams.

Certifications

- Scrum Foundation Professional Certification (SFPC™) – CertiProf.

Professional Interests

- Full-stack development with a focus on performance and usability.
- Cross-platform mobile applications.
- Collaborative teams and agile methodologies.
- Participation in real-world projects with social or commercial impact.

Languages

- Spanish (native).
- English (B1 – intermediate): fluent technical reading and functional communication in work environments.
